

Cerbo

Step 1: Update Git

1. Update local git repo to get the newest **Cerbo_Release** folder (under **firmware** directory), which contains **CerboReleaseFiles** folder, **update_Cerbo.py** and this document.

Step 2: Create bucket and update config.py

1. Open [Installation_Data.xlsx](#) at **Cerbo** sheet and pick the installation needs to update and **mark the installation in your color**
★ **Click the VRM link and check the installation status first, if it's abnormal, no need to update**
2. Go to [monitor](#) and click **Add new Installation** button

Installation Name*
Bachmann, Hütten/ZH | Schibli AG (2020-00087)

Region*
Zurich

Location*
Hütten

Country*
Switzerland

VpnIp*
10.2.0.227

VRM Link*
73926

Device Type
Venus

Information

Submit Cancel

- Copy **Installation Name**, **VpnIp** and **VRM Link**(**only the number before /dashboard in the link as follows**) from the sheet to here. Fill out **Region**, **Location** and **Country** using Google Map. Choose **Venus** as **Device Type**. And then press **Submit**.
 - ★ Location<Region<Country
 - ★ <https://vrm.victronenergy.com/installation/182172/dashboard>
- Go to **Information** tab of the installation, and copy **S3 Bucket Name**, **S3 Write Key**, **S3 Write Secret Key** one by one to update **s3 configuration** in **config.py** under the directory of **Cerbo_Release/CerboReleaseFiles/dbus-fzsonick-48tl**
 - ★ Please refresh the web page to get these information
 - ★ For the S3 bucket name, only need to change the installation id at the beginning.
 - ★ **Please make sure to copy the full key content.**
 - ★ **Please bear in mind that this step needs to be done for each installation!!!**

16 S3BUCKET = "2-c0436b6a-d276-4cd8-9c44-1eae86cf5d0e"
17 S3KEY     = "EX05b2e35442791260eaaa7bdc8"
18 S3SECRET  = "XFF0VzenDiEQoLPmhK6ML9RfQfsAMhrAs25MfJxi-24"
19

```

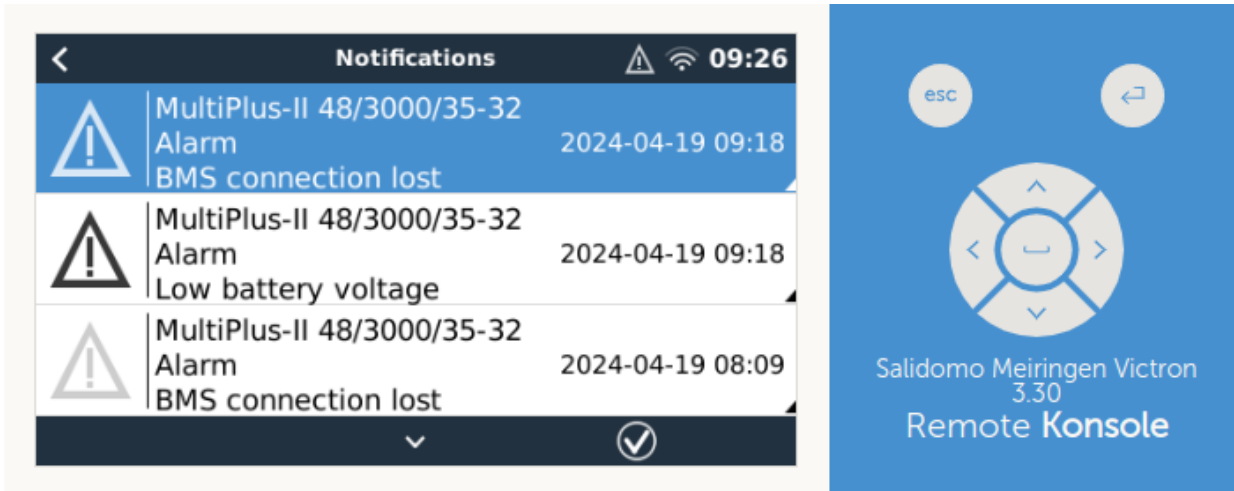

Step 3: All magic here

1. Navigate to **Cerbo_Release** directory in any kind of terminal
2. Run the script with the command: **python3 update_Cerbo.py <VPN_IP>**
 - ★ Replace <VPN_IP> with the actual VPN ip of the installation
 - ★ **If it gets stuck after a firmware update for a long time, try press Enter in the console where this script is running. If it takes way too long, e.g. over 20 minutes, please mark the installation and leave it there.**
 - ★ **If there is any mistake popping up during the process, simply comment previous procedures, and run the following part again.**

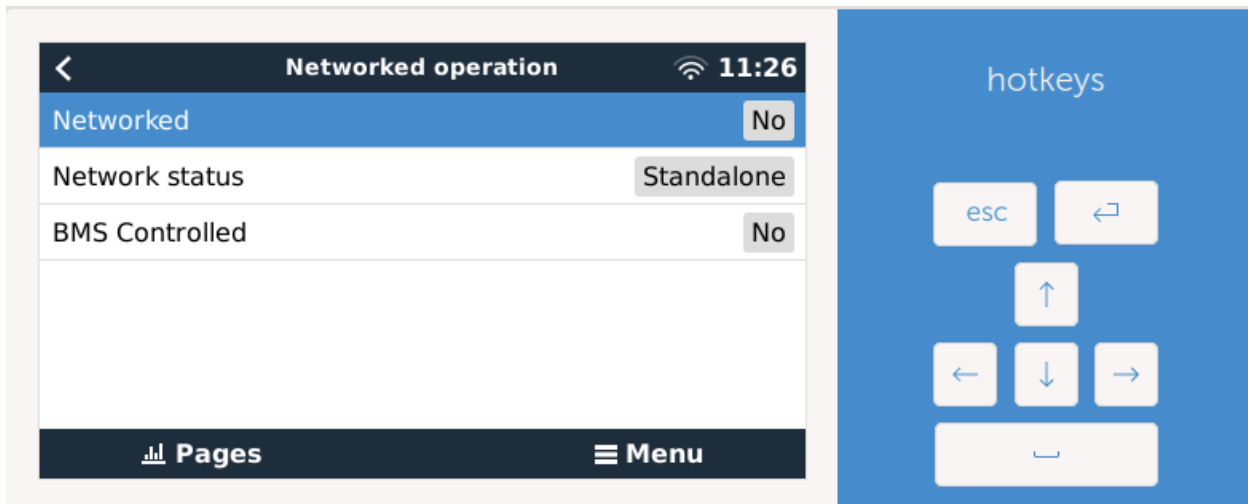

Step 4: Disconnect MPPT with BMS if there is PV on DC

1. If the installation has PV on the battery side as above, there would be an alarm in **Remote Console** in **VRM** complaining BMS connection lost from MultiPlus as follows

2. Go to **Menu=>Device List=>SmartSolar MPPT VE.Can 250/100 rev2=>Networked operation=>BMS Controlled**, press **Press to reset**. It turns out to be No as follows.

★ There may be more than 1 MPPT in an installation as shown in Device List, please repeat this step for each of them!!!

Step 5: Check everything works well

1. Whether the battery is there on VRM
2. Whether the battery is there on monitor
3. **Mark the installation in correct color red (failure with comments) or green(success)**
